

The first of the White House's major initiatives to get everyone access to free, at-home COVID testing

STARTS NOW

**NOW OVER 300 MILLION
WANT COVID TESTS**

ARE YOU PREPARED?

YOU NEED THEM. WE HAVE THEM.

LAB SYSTEMS

UNITED STATES + DUBAI + GERMANY

Molecular Lab Focused: TRAX provides end-to-end COVID19 testing solutions for molecular labs. Our products include: molecular analyzers, automated extraction machines, PCR test reagents, RNA extraction kits, swabs/VTMs, and all the plastic consumables that are part of the PCR testing process. TRAX aims to be a one-stop shop for busy labs, allowing labs to focus on processing patient samples.

Test Validation & On-Going Support: TRAX offers its lab partner a hands-on, virtual validation process that is free of charge to our partner labs. Most lab partners are validated within three virtual Zoom calls. Our technical team, led by our Chief Science Officer, leads all validation calls.

Extensive Global Medical Supply Chain: TRAX partners with medical development and manufacturing facilities to bring the right solution, at the right price, to market. The PhoenixDx test is manufactured by an Austrian Biotech firm with 25+ years of development and manufacturing experience. All TRAX consumables are 100% FDA approved. If a product is part of the COVID19 PCR test process, TRAX provides it to our lab partners. All equipment, reagents, and consumables are stocked in Columbus, Ohio.

Warehousing & Logistics: Centrally located in Columbus, Ohio, TRAX can ship to any part of the 48 contiguous states overnight. If our lab partners place an order by 1:00 PM, the order will ship by 6:00 PM. TRAX aims to be the logistics arm of our lab partners.

Pricing: TRAX's goal is to offer affordable, universally usable tests, equipment, and consumables at scale. In all categories, TRAX pricing offers our lab partners substantial cost savings over their current option.

TURNING AT THE SPEED OF NEED

Your customers demand fast response and turnaround. Understandably so, because patients ultimately need answers to critical health concerns. Likewise, our ability to supply PCR labs with panels, consumables, and tests is just as critical. Every minute you waste chasing supplies, or sourcing new materials is time you are not satisfying what is most important... **your customers.**

We provide our customers peace of mind knowing that they will receive the exact products they need exactly when they need them.

Trax is a medical logistics company based in the United States with offices in Columbus and Cincinnati Ohio, Germany and Dubai. We supply high-quality PCR and antigen tests, extraction kits, consumables, analyzers, automated extraction instruments and personal protective equipment to our growing network of medical labs, government entities and private firms. Our value proposition is simple: on time; every time. In this environment of broken supply chains and logistical uncertainty, Trax provides our customers peace of mind knowing that they will receive the exact products they need exactly when they need them.

www.traxconnects.com

INCREASE CAPACITY WITH OUR NATIONAL LAB NETWORK

Trax can provide access to its national lab network to increase testing capacity. Over the past two years, we have developed an extensive, geographically-diverse network of COVID-19 testing labs (Up to 50 at any time). We have insight into their testing capacity at any given time – as well as whether they could take on additional testing contracts. Partners can leverage this network to help meet surging testing demand across the country.

THE COMBINATION OF **SCIENCE & LOGISTICS**

We match lab professionals with their ideal environment and private labs to create new opportunities nationwide.

The supply chain, the tech, the expertise and the professionals to help your lab not just survive, but flourish.

OVER 5 MILLION
TESTS PER WEEK AVAILABLE

5 0 0 0 0 0 5

Scaled-Up Production Capacity MEANS YOU CAN MEET THE REQUESTS

The manufacturer's twin production facilities are producing over five million tests each week – putting Trax in a unique position to help immediately with the critical shortage in reliable, accurate testing. We can have up to one million tests delivered to your location within 7 days of receiving a purchase order and 20 million tests delivered to your location within 20 days of receiving a purchase order.

“

WHAT DRIVES US

We have a unique opportunity that few ever see in their lives. Covid is here, Covid isn't going away, and yet Covid is changing. The news of multiple vaccines have lulled the populace into a false sense of security while case numbers continue to spike. The genetic mutations have developed at an incredible speed and are brutal. Some of which are already proven in research to pass through the current Johnson and Johnson vaccine. We offer a lightweight, inexpensive PCR solution with an a la carte monoplex or regionally assayed multiplex that will soon become the gold standard of Covid-19 Genetic Mutations testing.

”

“

NEVER SLOW DOWN OVER SUPPLIES

Don't get caught waiting for PCR plates, optical film, reagents, or pipette tips ever again. We can deliver any thing from swabs to analyzers and extractors to the lower 48, by the time you wake up tomorrow.

”

As a U.S. distributor for Procomcure Biotech, we use real world feedback and data to help create cutting-edge products and opportunities for our labs.

TRAX LAB SYSTEMS CASE STUDIES

Capture Collective was born out of The Ohio State University. Inventor Dr. Jacob and The Ohio State University, teamed up with Ikove Capital, to bring innovative solutions to the market. TRAX Lab Systems in conjunction with Capture Collective set up a high-throughput, molecular lab, in a 40-foot container at Terminal 2 of Honolulu International Airport. This lab is designed to keep the tourism industry for Hawaii continuing as much as possible through the pandemic and to keep the islands safe and Covid free.

The mobile airport lab has the ability to process up to 10,000 PCR tests in one day and can turn around test results in under six hours. The entire lab is staffed and run by local Hawaiian residents which helps maintain consistency. The entire lab was constructed in under one month and was designed to process travelers arriving from the U.S. mainland and international destinations.

Trax Lab Systems became involved with implementing this solution and was the supplier for all of the equipment, setup, and validation. Trax also supplied all of the PCR tests, extraction kits, swabs/VTMS, and PCR consumables. As an additional service offering Trax built a custom inventory management system, and maintains all supply and logistics efforts post lab opening.

The lab was responsible for the Hawaiian tourism opening safely during the pandemic and received many accolades from local government officials and other organizations.

Founded in 1984 Pacific Toxicology Laboratories "PacTox" is one of the country's leading specialty laboratories. Their state-of-the-art facility in Los Angeles is a multi-discipline clinical laboratory center performing Clinical Toxicology, Industrial Drug Testing, Therapeutic Drug Monitoring, Biological Monitoring, Forensic Toxicology, Medical Surveillance, and COVID-19 Testing.

PacTox began working with the PhoenixDX PCR Test from Procomcure Biotech in September 2020. The test is easy to use due to its simple protocol that our techs can repeatedly follow. This is key to providing consistency in testing accuracy and the ability to accomplish high volume work-flows as seen in the height of the Covid pandemic.

Along with the ability to execute tests consistently, rapidly and with high accuracy, it is also important to have the necessary supplies readily available and on-time. Also, when technical questions come up, it is important for our team to feel confident that they can talk to an expert and come up with a solution to a challenge or get an answer that is accurate. Both the logistics and tech support from TRAX Lab Systems has enabled PacTox to keep up with the growing demand for high-quality PCR testing in California and around the country. PacTox mentioned that they have contacted tech support several times and they've always promptly answered our questions and concerns.

PacTox features a broad range of resources, our knowledgeable staff makes every effort deliver the best in service and quality with every test we perform. We are licensed federally and by multiple state regulatory programs. The laboratory adheres to guidelines stipulated by the Clinical Laboratory Improvement Amendments (CLIA), College of American Pathologists (CAP), and the Substance Abuse and Mental Health Services Administration (SAMHSA).

PARTNERS WHO PUT YOU FIRST

ENJOY OVERNIGHT DELIVERY AND 24/7 CUSTOMER SERVICE

Our customer service and technical support have been what has set us apart in the market. We offer professional “boots on the ground” technical support to help our lab partners plan, set up and validate our tests in real time. And, in emergency situations, we have personally couriered supplies to customers – with same day service – to keep them up and running. **We are, understandably, proud of our technical and customer service record; it is truly what sets us apart from our competition**

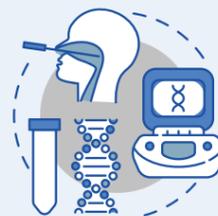

ON YOUR SIDE FROM PRODUCTION TO VALIDATION

We work directly with our manufacturers to help bring business-changing PCR solutions to our labs, and have a world-class supply chain to keep them producing without delays.

For our labs who are adding panels or are starting to scale, we offer hands-on, in person lab professionals to help plan, set up, staff and validate your lab.

WE ARE GAME CHANGERS

Working together, we provide our laboratories with cutting-edge products that give them a competitive advantage in their marketplace and increase the quality of patient care.

TRAX SUPPLIES PCR TESTS, EXTRACTIONS, CONSUMABLES & OTHER LAB EQUIPMENT

Trax obtained its EUA on April 20, 2020 and has sold millions of PCR tests across the United States since then. We currently have these tests and supplies in our warehouse and have the capacity to deliver over 5,000,000 each week.

Gold Standard in Accuracy: Our PCR test performs at 100% accuracy at a target Limit of Detection (“LoD”) level of 50 cp/mL. To obtain this level of accuracy, the PhoenixDx test uses two different gene targets, which allows it to eliminate false-negative results. Studies have also shown similar effectiveness against Delta and Omicron. Our tests are compatible with all common Lab Instruments: Developed by an Austrian life sciences and biotech lab with over 25 years of manufacturing experience.

The test can be used with virtually any hospital/lab diagnostic equipment, including (but not limited to) the following equipment:

- | | | |
|--|-------------------------------------|--------------------------------|
| 1. BioRad CFX96 | 4. qTower ³ RealTime PCR | 7. Thermo Fisher QuantStudio 3 |
| 2. Qiagen Rotorgene Q | 5. DTprime (DT-96) Real-time PCR | 8. Thermo Fisher QuantStudio 5 |
| 3. Applied Biosystems ABI 7500 Fast RealTime PCR | 6. Thermo Fisher QuantStudio 1 | 9. Abbott m2000 Real-time PCR |

We also provide free technical support to each of our customers, and assist them in validating our PCR tests on their equipment and supply labs with every piece of equipment – and every consumable – that they need to perform their testing. To provide peace of mind, we are also happy to provide existing customer referrals to private firms or public entities seeking to make an initial large purchase.

TRAX SUPPLIES ITS HIGH-QUALITY ANTIGEN TESTS UPON RECEIPT OF THE EUA

Our antigen tests come individually packaged for single use and provide accurate results within 15 minutes. These powerful, compact diagnostics are perfect for use at airports, hotels, schools, large events and gatherings, office or other places of work, etc. Pending regulatory authorization, they are indicated for professional use as well as over-the-counter (“OTC”), in-home use.

Regulatory Authorization: Our manufacturing partner has obtained provisional authorization from the Health Sciences Authority in Singapore and a CE mark for use in the European Union. Trax is in the process of obtaining an EUA from the US FDA. We expect to have FDA EUA authorization for the antigen test (both professional use and OTC) early in Q1 2022.

Superior Sensitivity/Specificity: As you will see from the clinical trial data, our antigen test performs at 97% sensitivity and 99% specificity with a LoD level of 50 cp/mL – which, compared with currently-approved tests (82-88% specificity) will make it one of the most highly-specific antigen tests to receive the FDA EUA.

No Lab Needed: With all the required equipment contained in the test box, Trax’s antigen tests can be used anywhere by anyone. With appropriate regulatory approval, these tests can be used at home without the inconvenience of nurses or labs. Simply open the box, take the test and wait fifteen minutes for the results. It’s that easy.

Scaled-Up Production Capacity: The manufacturer's production facilities are producing over 2,000,000 tests per day – again allowing Trax to fill significant volume immediately and efficiently. Similar to our PCR test commitment, we can have up to one million tests delivered to your location within 7 days of receiving a purchase order.

Forward Purchase Contract: We can discuss the option of a forward purchase contract whereby your lab would lock in a guaranteed supply of antigen tests (upon receipt of EUA) at a competitive price, which would provide your lab some supply/budgetary certainty around its antigen testing offering.
